

## NIE-MPI, Mathematics for Informatics - Homework no. 2

---

### Instructions:

- You should try to solve all the exercises. Even if you do not do all the exercises, you can get all the points.
  - Presentation is taken into account; correct results themselves are not enough. The reasoning on how the result was found should be clearly visible.
  - Comment your calculations in a reasonable way: the reader should understand what you do and *why*. The solution should be “possible to read”, not “needed to decrypt”.
  - Do not answer unasked questions. It is important to know what is needed to solve the problem and what is not needed.
  - If you use a result from another source than the lectures and tutorials, cite your source properly (do not forget to cite used software if applicable).
  - The homework should be given by hand or sent by email at `dolcefra@fit.cvut.cz` before the beginning of the tutorial on Thursday November 30th, 2023.
- 

**Exercise 1.** Find a generator and all subgroups of  $\mathbb{Z}_{31}^\times$ . How many distinct generators are there? Say if  $\mathbb{Z}_{17}^\times$  contains a subgroup isomorphic to the following groups:

- $\mathbb{Z}_2^+$ ,
- $\mathbb{Z}_3^+$ ,
- $\mathbb{Z}_4^+$ ,
- $\mathbb{Z}_5^+$ ,
- $\mathbb{Z}_9^+$ ,
- $\mathbb{Z}_2^+ \times \mathbb{Z}_5^+$ ,
- $\mathbb{Z}_{15}^\times$ .
- $\mathbb{Z}_{30}^\times$ .

If yes, find an isomorphism. If not explain why such an isomorphism can not exist.

**Exercise 2.** Is the set  $M = \{a + b\sqrt{7} : a, b \in \mathbb{Q}\}$  with classical number addition and multiplication a field? Prove your answer. If it is a field, find another field to which it is isomorphic and give the isomorphism.

**Exercise 3.** Let  $f$  and  $g$  be two permutations over 7 elements, where

$$f = (6325147) \quad \text{and} \quad g = (1745632).$$

- (a) Find  $f \circ g$  and  $g \circ f$ .
- (b) Find  $\langle f \rangle$  and  $\langle g \rangle$ , i.e., the smallest subgroups of  $S_7$  (group of all permutations of 7 elements) which contain respectively the permutation  $f$  and the permutation  $g$ .
- (c) Find  $f^{81} \circ g^{37}$ .
- (d) What is the order of  $\langle g \circ f \rangle$ ?

**Exercise 4.** Let us consider the field  $GF(2^4)$  with multiplication modulo  $x^4 + x^3 + 1$ . Find

- (a) all  $y$  such that  $1010(y + 0011) = 1111$ ,
- (b) all  $y$  such that  $y^2 = 0101$ ,
- (c) all  $y$  such that  $y^{33} = 0101$ .
